4. Instal Elastic search on AWS server:

The screenshot displays the AWS Management Console interface for an EC2 instance named 'i-Ob7159b8ba1087206' (ELKstack). The terminal window shows the command to install Elasticsearch 1.7.2 using yum. The output indicates that the package is being installed from the 'elasticsearch-1.7.2.noarch.rpm' repository. The transaction summary shows that 1 package is being installed.
